## MAN

### THE TIME IS RIGHT

Contemporary design between urban and nature – For life hunters, independent thinkers and warriors of the light.

## MYMi contemporary jewelry – empowering your everyday

MYMi is contemporary jewelry combining innovative materials with artisanal craftsmanship.

Conceived as design with purpose to accompany our unique and conscious lifestyles, MYMi's subtle aesthetic empowers the wearer with its guiding principles of being honest, responsible and respectful towards nature and ourselves.

### Collections

Caring and outgoing, the particular spirit of MYMi is captured in its three unique women's collections : BASIC - COLLECTION - UNIQUE including beautifully hand crafted earrings, necklaces and bracelets in different sizes, that combine both strength and elegance.

A visionary fourth line MAN expresses the essence of those seeking style combining urban life, history and nature.

### Cellulose Acetate

MYMi's inspiration coming from the beauty of nature manifests in the careful choice of its exclusive, REACH - certified eco-friendly acetate material produced by Italian Mazzuchelli 1849.

The company is drawing on its expertise in the field for more than a century, supplying hand made quality cellulose material for luxury items from sunglasses to accessories.

Creating a precious raw material like cellulose acetate involves a hand made process that lasts over several weeks.

Using innovative production methods that replace petroleum through a combination of cotton and wood fiber; bio-acetate makes for a light and warm material comfortable to wear with very low risk of allergies.

Cellulose Acetate is a recyclable bio-plastic and allows for the creation of playful colors that can imitate natural materials like horn or tortoise shell without using any of nature's precious resources.

Its unique and mesmerizing acetate patterns, already a work of art in itself, award it a one of a kind look and feel.

### Double Handmade

Similar to crafting a design object using wood, MYMi jewelry from high quality acetate is made to shape with precision and traditional craftsmanship.

Paying attention to every detail including engravings and positioning of the metal components, it takes at least a week to create one piece.

MYMi solely uses nickel-free metals, in order to minimize allergies, such as: pure titanium G1 for all earring posts, brass, stainless steel, 925 sterling silver and for the plating pure rhodium and 18 or 21 karat gold.

After the design-process, every piece of MYMi jewelry starts as a sheet of acetate that goes through multiple steps.

Once cut in the appropriate shape, the acetate is moulded and thermoformed by hand, using specialized tools.

It is then carved, sculpted like horn or fine wood and polished before the last decorations are applied.

We refer to this process as Double Handmade: hand-made jewelry using hand-made raw material that grants each piece to be truly individual - 'made for you'.

### Enjoy

A magical synergy between artful high-end craft and eco-friendly alignment transforms MYMi into delightful jewelry you can wear for every occasion.
